

How To – “Check LDAP “ to receive group emails

Use email credentials to Log into: <https://ui.nems.noaa.gov>

Subtree NOAA

ohn.H.Doe) and password:
NOAA LDAP UserID:
NOAA NEMS Password:
Login

Access to the ldap account is managed by the shoreside NOAA email directory username and password.

For shipboard personnel the username is the same between the ship and the shore but the passwords are administered differently due to the lack of the ability to synchronize data from the shipboard directory servers to the shoreside directory servers. There is also a security requirement for each individual to create, manage and maintain a password. The following procedure will allow shipboard personnel to create a password in the shoreside NOAA email directory.

To receive an initial shoreside password, please send an email request to:

omao.ship.directory.admins@noaa.gov
